Features & Functions

- Displays utilization by entire department or each piece of datalogged equipment in the department
- Uses historical data log files from compressed SuperDATA logs
- Logged data can be summarized
- Very flexible based on VB Scripting
- Turns tabular data into graphical data
- Gas flow totals by Furnace and Group
- Gas and electricity cost
  - Dollars by KW or SCF
  - ENDO, Natural Gas, Nitrogen, etc.
- Groups and data objects are used for ease of reporting, providing user-defined data for:
  - Furnace Type
  - Department
  - Line
  - Work Cell
- Cost per load reporting
